Summary：

This is my first time using TouchDesigner. The video tutorial on Eclass is very clear. When I was dealing with 3D effects, I could achieve amazing visual effects by adjusting parameters. I first studied how to operate this software in the most basic way (just like learning MAXMSP). According to the tutorial, I made a dreamy fountain. Through the tutorial, I learned about gradient effects, noise, rendering, Facet calculation normals, etc. This makes me look forward to further learning.
